# Shayan

## Product Engineer

sfx.pers@gmail.com | threads.com/@shayanameen1108 | x.com/shayanameen1108 | Karachi, Pakistan

### PROFILE

I build custom web products end to end, and I mean the whole thing: the design decisions, the web and mobile clients, the data model, the infrastructure underneath. Some of it is client work that starts as an empty repository or as a codebase with history. Some is my own, shipped and running with real users. What I gravitate to is the complicated middle: who may do what, who owes whom money, and what happens when something goes wrong.

### RECENT EXPERIENCE

**Product Engineer**
**Jan 2025 to Jul 2026**
**Ars Futura / Remote, Zagreb, Croatia**

- I build and ship features on long-running client products, across the interface, the API behind it, and the release.
- I work inside client teams alongside their design and product people, on new builds and on codebases that arrive with history.
- I review other engineers' work and help set the conventions a new joiner picks up on the way in.

**Freelance Software Engineer**
**Apr 2025 to Present**
**Upwork / Remote**

- I took client products from the first scoping call through release, deciding what to build as often as building it.
- I delivered each one whole: the interface, the API behind it, and the admin tooling that staff needed to run the thing once it was live.
- I was the only engineer on most of them, so the design calls, the data model, and the deployment were mine too.

**Software Engineer**
**Oct 2023 to Nov 2024**
**Jumppace Pvt Ltd / On-site, Karachi, Pakistan**

- I shipped production web applications on React, Node.js, and MongoDB, working on both sides of the API.
- I wrote the shared components and API contracts the rest of the team built features on after release.
- I picked up whichever part of the product needed work, rather than staying on one layer of it.

**React.js Developer**
**Apr 2022 to Sep 2023**
**AZ Code Arena / Hybrid, Karachi, Pakistan**

- I turned Figma designs into responsive React interfaces built from reusable components.
- I wired those interfaces up to REST APIs and sign-in flows, and learned where a design stops answering questions and the engineer has to.

### SELECTED PROJECTS

**EcoBuiltConnect**
**https://shayanameen.work/work/ecobuiltconnect**
**A marketplace for reclaimed building materials, where every listing is one of a kind**

**ArtisanConnect**
**https://shayanameen.work/work/artisanconnect**
**Hiring a plumber, with the money held until the work is done**

**RushUploads**
**https://shayanameen.work/work/rushuploads**
**Big files sent by link, paid for by the ads on the download page**

### SKILLS

**Web and mobile:** TypeScript, React, TanStack Start, Tailwind CSS, React Native, Expo
**Backend and data:** Node.js, PostgreSQL, REST APIs, schema and query design
**Infrastructure:** Docker, Cloudflare, AWS, CI/CD, automated testing
**AI:** LLM integrations, RAG pipelines, evals and prompt engineering

### LANGUAGES

Urdu: Native | English: Professional | Turkish: Fluent

### EDUCATION

**BS Computer Science, NED University of Engineering & Technology**
**2022 to 2026**
Karachi, Pakistan
